S&W RESPONSE CONSUMER SAFETY ALERT

DESCRIPTION OF ISSUE:
Smith & Wesson has identified a condition where, if it is fired even in full-bore mode, and the trigger is pulled, an out-of-battery discharge may occur. An out-of-battery discharge could potentially expose an untrained user to the risk of being injured by the firearm.

DESCRIPTION OF THE PRODUCT IMPACT:
Although we have only observed this condition in a very small number of products, make sure that you are aware of all affected Smith & Wesson Rifles manufactured before February 12, 2014. If you own an affected Rifle, contact your local retailer or your nearest Smith & Wesson customer service representative for an appointment to have your firearm inspected and repaired for this condition.

WHAT SHOULD YOU DO NEXT?
1. If your firearm is affected, it has been inspected and repaired.
2. If your firearm is not affected, you do not need to take any further action.
3. If your firearm is not affected, you do not need to wait for the repair.
